How to stay safe online

What is fun

Fun is where you can play games on a computer or anything where you have fun but when your having fun there's a problem you can get carried away and talk to people you dont know heres examples of having fun

Watching Videos and Listening to Music.
Playing Games.
Finding Random Fun Stuff.
Learning Something New.
Using Social Networking.
Having Fun Without the Internet.
Exploring Computers as a Hobby.

How to stay safe

To stay safe you can download a vpn making sure you location is nowhere near where you live and then screen shot report then block them so you cant lose your stuff and get robbed also Most people store a lot of personal information on their computers. If you don't protect your computer properly when you're online, it's possible that personal details could be stolen or deleted without your knowledge. Your computer can be attacked in a number of ways over the internet.

Websites

Look for the "S" in HTTPS you can also Check for a website privacy policy Verify their trust seal If a trust seal is legitimate, clicking on it will take you to a page that verifies the authenticity of that seal. Or Know the signs of website malware. So thats the signs if you see them you know the websites safe

Here are some vpns to use NordVPN: The best all-round VPN. ...ExpressVPN: The best VPN for streaming. ...Surfshark: The best-value VPN. ...Hide.me: The most feature-packed VPN. ...CyberGhost VPN: The most user-friendly VPN. ...Private Internet Access (PIA) VPN: The best VPN for expert users. ...StrongVPN: The best basic VPN.
